## UNIVERSITY ADMIT ELIGIBILITY PREDICTOR

## **ASSIGNMENT - 2**

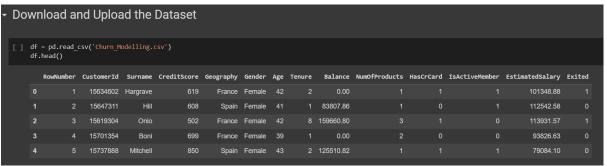

Date	26th September 2022
Team ID	PNT2022TMID27839
Student Name	Akash S (311519104007)
Domain Name	Education
Project Name	University Admit Eligibility Predictor
Maximum Marks	2 Marks

## 1.) IMPORT THE REQUIRED LIBRARIES

```
↑ ↓ ⇔ □ ‡ :

import pandas as pd
import numpy as np
import seaborn as sns
```

### 2.)DOWNLOAD AND UPLOAD THE DATASET

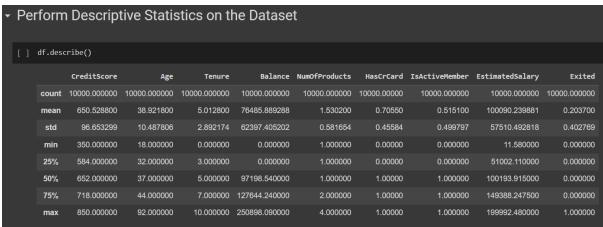

#### 3.)HANDLE MISSING VALUES IN THE DATASET

```
    Handle the Missing Values in the Dataset

  [ ] #Removing Unwanted Values
       df = df.drop(columns=['RowNumber','CustomerId','Surname'])
  [ ] df.isnull().sum()
       CreditScore
                         0
       Geography
                         0
                         0
       Gender
                        0
       Age
                        0
       Tenure
       Balance
       NumOfProducts
                        0
       HasCrCard
       IsActiveMember
                        0
       EstimatedSalary
                        0
       Exited
                         0
       dtype: int64
```

## 4.) PERFORM THE DESCRIPTIVE STATISTICS ON THE DATASET

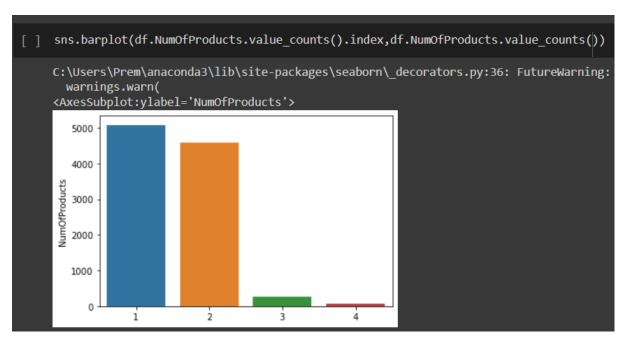

# **5.) PERFORM VARIOUS VISUALISATIONS**

## a.) UNIVARIANTE ANALYSIS

## [ ] sns.lineplot(df.Age,df.Exited) C:\Users\Prem\anaconda3\lib\site-packages\seaborn\\_decorators.py:36: warnings.warn( <AxesSubplot:xlabel='Age', ylabel='Exited'> 1.0 0.8 0.6 Exited 0.4 0.2 0.0 90 20 50 80 30 40 60 Age

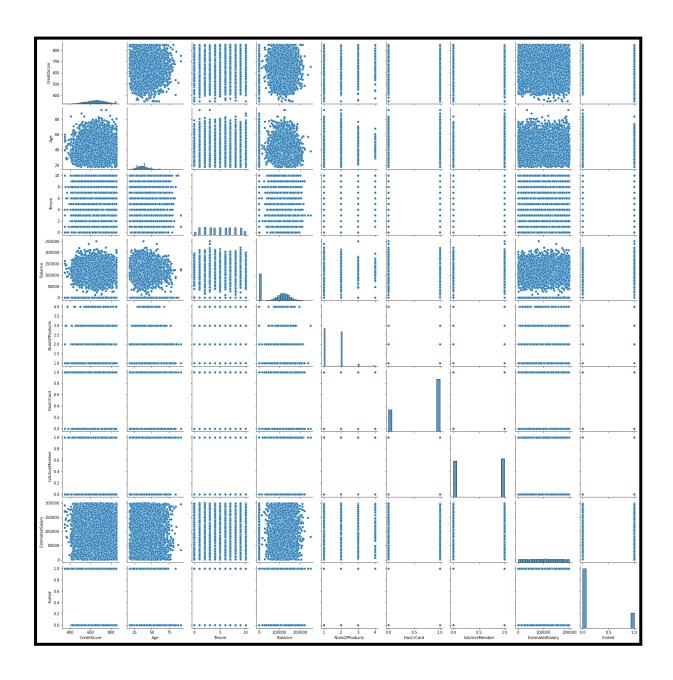

### **b.) BI - VARIANTE ANALYSIS**

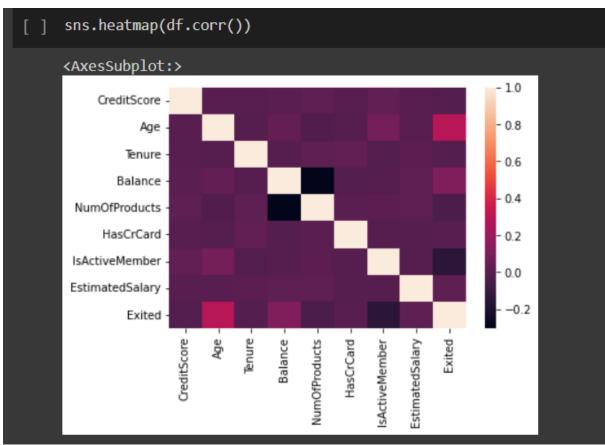

```
    Bi - Variante Analysis

  [ ] def countplot_2(x,hue,title=None,figsize=(6,5)):
         plt.figure(figsize=figsize)
         sns.countplot(data=df[[x,hue]],x=x,hue=hue)
         plt.title(title)
         plt.show()
  [ ] countplot_2('IsActiveMember','NumOfProducts','Credit Card Holders Product Details')
                       Credit Card Holders Product Details
                                                 NumOfProducts
          2500
                                                     1
                                                       2
                                                    3
          2000
       1500
1500
          1000
           500
                                IsActiveMember
```

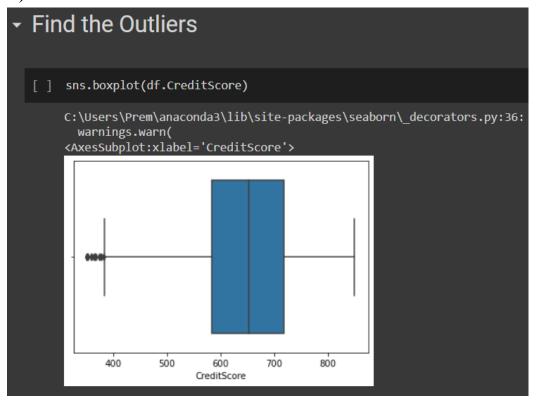

# c.) MULTI - VARIANTE ANALYSIS

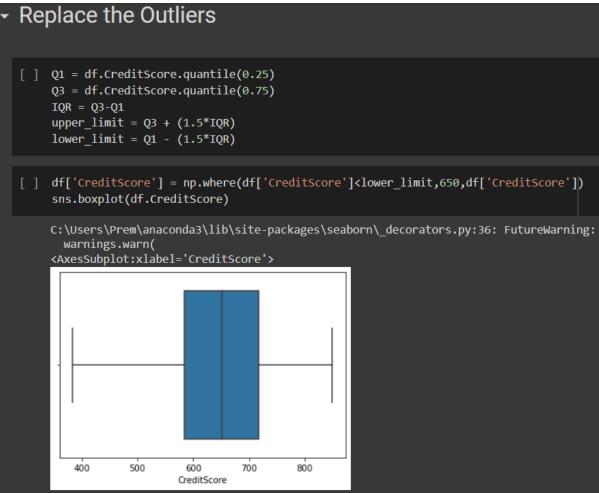

[]	df.corr()
